

Task 1: • Set up a basic React Router with two routes: one for a Home page and one for an About page. Display the appropriate content based on the URL.

**Home.js:**

```
import React from 'react';

const Home = () => {
  return <h2>Welcome to the Home Page!</h2>;
};

export default Home;
```

• **About.js:**

```
import React from 'react';

const About = () => {
  return <h2>About Us Page</h2>;
};

export default About;
```

**App.js**

```
import React from 'react';
import { BrowserRouter as Router, Route, Routes } from 'react-router-dom';
import Home from './components/Home';
import About from './components/About';

const App = () => {
  return (
    <Router>
      <div> <h1>React Router Example</h1>
```

```
<Routes>
<Route path="/" element={<Home />} />
<Route path="/about" element={<About />} />
</Routes> </div> </Router> ); };
export default App;
```
