

Task 1: • Create a React component that renders a list of items (e.g., a list of fruit names). Use the `map()` function to render each item in the list.

#### App.jsx

```
import { useState } from 'react'
import reactLogo from './assets/react.svg'
import viteLogo from '/vite.svg'
import './App.css'
import Fruitlist from './Fruitlist'
```

```
function App() {
  const [count, setCount] = useState(0)

  return (
    <>
      <Fruitlist />
    </>
  )
}
```

```
export default App
```

#### Fruitlist.jsx

```
import React from 'react'

const Fruitlist = () => {
  const fruits = ['Apple', 'Banana', 'Orange', 'Mango', 'Pineapple'];

  return (
    <div>
```

```
<h2>Fruit List</h2>

<ul>

  {fruits.map((fruit, index) => (
    <li key={index}>{fruit}</li>
  ))}

</ul>

</div>

);
}
```

```
export default Fruitlist;
```

## Fruit List

- Apple
- Banana
- Orange
- Mango
- Pineapple
