

- Question 2: What are some common event handlers in React.js? Provide examples of `onClick`, `onChange`, and `onSubmit`.

Common Event Handlers in React:

1. **onClick:** Triggered when a user clicks an element (e.g., a button).

```
function handleClick() {  
  alert('Button clicked!');  
}  
  
<button onClick={handleClick}>Click Me</button>
```

2. **onChange:** Triggered when the value of an input element changes

```
function handleChange(event) {  
  console.log('Input value:', event.target.value);  
}  
  
<input type="text" onChange={handleChange} />
```

3. **onSubmit:** Triggered when a form is submitted.

```
function handleSubmit(event) {  
  event.preventDefault();  
  alert('Form submitted!');  
}  
  
<form onSubmit={handleSubmit}>  
  <button type="submit">Submit</button>  
</form>
```
