- Create a React component that renders the following JSX elements:

  - A heading with the text "Welcome to JSX".

  - A paragraph explaining JSX with dynamic data (use curly braces to insert variables).

App.jsx

```
import { useState } from 'react'
import reactLogo from './assets/react.svg'
import viteLogo from '/vite.svg'
import './App.css'
import Header from './Header'
function App() {
  const [count, setCount] = useState(0)

  return (
   <>
    <Header />
   </>
  )
}

export default App
```

Header.jsx

```
import React from 'react'

const Header = () => {
   return (
     <>
        <meta charSet="UTF-8" />
        <meta name="viewport" content="width=device-width, initial-scale=1.0" />
```

```
        <title>HTML Header Example</title>

        {/* Header Section */}

        <header>

          <h1>Welcome to My Website</h1>

        </header>

        {/* Main Content */}

        <main>

            <p>Lorem ipsum dolor sit amet consectetur adipisicing elit. Neque itaque atque, voluptas doloribus
commodi et! Vero, rerum. Pariatur ex quae quia, ea sapiente placeat harum aspernatur corrupti deserunt
asperiores! Consectetur?</p>

        </main>

      </>

    )

}

export default Header
```

App.css

```
header {

  background-color: #4CAF50;

  color: white;

  padding: 20px;

  text-align: center;

}

header h1 {

  font-size: 36px;

  margin: 0;

}
```
